In this tutorial, we will cover the most basic Photoshop commands. Learning to create images in Photoshop is a long and involved process. By following this tutorial, you will be able to create a series of four related images in Photoshop. Step 1: Using your mouse, create a new document of size 567 pixels wide and 572 pixels high using the File menu. The size of the resulting file will be called "test1.psd." This is the document that will contain the four images that we will be creating. - Click New; however, if you have Photoshop Elements installed, you should use Create a new file. - Click Yes; however, if you have Photoshop Elements installed, you should use Create a new file. - Set the Zoom to 100%; however, if you have Photoshop Elements installed, you should use 100%. - Click the top left icon that looks like a paintbrush, then select the Brush Tool. Step 2: Now you need to set the Brush Tool options. - Click the top menu on the Brush Tool to bring up the Brush Tool Options. - Click the Brush Tool Options button. Step 3: The Brush Tool Options window should look like the image on the right. Uncheck the Image Slices check box. This setting creates a single, continuous stroke across the length of the image. You can use this tool to create the brushstrokes, but it will not create a realistic effect. - Click OK to close the Brush Tool Options window. - Click the top menu on the Brush Tool to bring up the Brush Tool Options window. - Click the Brush Tool Options button. Step 4: The next set of instructions will show you how to set up the brush. - In the Image Slices section, you can set the Style of the Brush Strokes. The one shown above, a Paintbrush Style, creates the brushstrokes. Set it to a 1 px Square Stroke at 20 percent opacity. - In the Distance section, enter 15. The X and Y coordinates given should be pixels. You can test how pixels and inches compare by selecting View, Rulers & Guides, and selecting the appropriate checkbox in the View menu. The desired units of measure will be listed above the rulers. - Enter 15 as the Hardness value. Your final value should look like

In this article, we'll show you how to add custom text to images using Photoshop Elements. Lets start! Adobe Photoshop Elements 12.0 and above Create a new file Open Photoshop Elements, go to File > New. Under File Type, select JPEG from the drop-down menu. For File name, enter the text you want to add to the image. For Dimensions, enter a width and height that can be used in a wide variety of applications such as creating posters. The file can be saved in .jpeg format for later use. Source: Adobe To add text in Photoshop Elements, follow these steps: Go to Select > Modify > Type. The Type palette will open. Choose Solid. In the Type toolbox, choose Underline, Strike-through, and several others. For this tutorial, choose Underline. Your Type tool should look like this now: Change the font to a typeface of your choice. The default font is Calibri, but you can select any font you like in the Font panel. For the Underline text style, we will choose a bold font. Switch to the Type tool. Now we need to drag the text over the image we will be adding it to. When you drag your text over the image, the text will be added to the image. Unfortunately, the text that you dragged will appear with an underline. It is necessary to ungroup the type first. To do this, click on the dotted lines surrounding the text. After ungrouping the text, you can move the text to the desired location of your image. If you want to change the color of the text, simply click on the color you want in the Type toolbox. Once you're done, it's time to apply the text. You can do this by pressing the "Ctrl" and "B" keys. You can also double click the type to apply the changes. The default text size is 12 points. It is smaller than the original font size. To resize the text, click on the ("Size") tabs and change the size until it's what you want. You can make the text larger and more legible by adding spacers between the letters. Simply select the letters you want to add a spacer between and 05a79cecff

How to Paint with a Pen Tool: Photoshop comes with the Pen tool, which is useful for texturing and designs. The tool is used to create lines and text. The Pen tool is used to draw lines, freehand, using only a single point. The Pen tool is used to create straight and curved lines, using other points. How to Paint with a Brush Tool: Brushes come with Photoshop and can be used to create various effects. They are helpful for applying color, levels, and light to images. The Brush tool is divided into three main categories: One way to use the Brush tool is to paint with a stroke. The stroke takes from the brush. The behavior of the stroke is entirely controlled by you. A great tool for working quickly is the Eraser tool. The Eraser is used to erase unwanted parts of an image. You can use the Eraser tool and choose multiple colors, shapes, and sizes. How to Paint with the Magic Wand Tool: Using the Magic Wand tool, you can quickly select an area of an image. The Magic Wand tool can be used to remove backgrounds, eliminate unwanted objects, or paint with a brush. The Magic Wand tool allows you to click on the beginning and end points to make a selection. For example, you can click on a rectangle and select the background of the image, as shown in Figure 11-12. Figure 11-12: The Magic Wand tool can be used to select areas of the image. The Magic Wand tool is useful for selection, brush, and pen work and can be used as an eraser. The Size setting will affect how large the area you're selecting is. In Figure 11-12, the selected area is shown in green. To select multiple areas on an image, hold down the Shift key while clicking on a new area. For example, if you want to select all the areas of the white in Figure 11-12, you would hold down the Shift key and click in the white area on the left and then in the white area on the right. How to Create Custom Layers: Using the layer tools is one of the most common ways of working in Photoshop. A layer is a set of pixels that are grouped together and kept in order. Layers are essential to the way images are worked on in Photoshop because they allow you to paint, color, mask, and move objects separately. Layers are

Q: How to sort a list in java The question is simple : I got a list like this : List list = new ArrayList(); How can i sort the list in the following order : John(Is it possible to sort the person with the name John? Mellissa Mike Adrian A: Assuming your list of persons is a result of a call to some method which returns the list of persons, using the Collections.sort(List list, Comparator comparator) method with an appropriate Comparator, you will end up with an sorted list of Person objects. A: List list = new ArrayList(); You have created a List containing Objects of type Person. list.sort(); this will sort your list. If your Person class has the name attribute, this will sort on name. If you want to sort by name, you will have to add a compareTo method to your Person class which has been defined to do that. Ethnic disparities in the prevalence and treatment of hypertension in a Medicaid population Despite the large proportion of black and Hispanic patients in the United States, little is known about variations in hypertension treatment and management across ethnicities. To characterize disparities in the treatment of hypertension and the proportion of black and Hispanic patients in North Carolina (NC) on antihypertensive medications by insurance status, drug class, and other demographic and clinical factors. Participants were part of the NC Cardiovascular Outcomes and Costs (NC-COCO) Study, a population-based, retrospective cohort of adult patients with hypertension in North Carolina enrolled in Medicaid. Prevalence of hypertension, antihypertensive medication use, and hypertension control as measured by treatment rate and blood pressure control. Unadjusted and adjusted prevalence and treatment of hypertension, as well as hypertension control rates, were compared between races (blacks vs whites) and income levels (marginal vs nonmarginal). In adjusted analyses, black patients had lower use of angiotensin-converting enzyme inhibitors/angiotensin receptor blockers (AIs/ARBs) (7.2% vs 10.7%; P
